

## MIC Strategies, Goals, and Plans for Greenhouse Gas Management

### 1. Greenhouse Gas Management Strategy

In response to climate change, the company initiated a Group-wide ISO 14064-1 Greenhouse Gas (GHG) Inventory in 2024. We continuously monitor energy-consuming equipment and sequentially implement various energy-saving and carbon reduction initiatives to minimize the carbon emissions generated from our company operations.

### 2. Greenhouse Gas Emission Reduction Goals

- Long-term goal: Achieve net-zero emissions (Scope 1 + Scope 2) at designated customer product manufacturing facilities by 2050.
- Short-term goal: Before 2030, the annual carbon reduction goal is to decrease carbon intensity (Scope 1 + Scope 2) by 1.0% compared to the previous year.
- 2024 Performance: Our carbon intensity (Scope 1 + Scope 2) for the 2024 fiscal year decreased by 3.88% compared to the 2023 fiscal year.

### 3. Greenhouse Gas Reduction Plans

1. Continuous Improvement: Continuously implement various energy-saving and carbon reduction initiatives annually.
2. Energy Management: Continue to execute the ISO 50001 Energy Management System to reduce electricity consumption intensity.
3. Green Power Generation: Install and operate solar power generation systems in our factory.
